

Book My Show Assessment

Objective

You have to scrape movie listing data from the **BookMyShow Movies** page for a popular city and store it in a database.

Submission

1. Python script (Attached to mail)
2. Database table screenshot

	id	city	movie_name	language	format	rating	scraped_at

3. Short Summary:

- Movie data of Nagpur city from the BookMyShow website was successfully scraped using Python (Requests/Selenium).
- Key attributes such as city, movie name, language, format, rating, and scrape timestamp were captured accurately.
- The scraped data was validated and stored in a structured MySQL database table without errors.
- CSV files were also generated for backup and verification purposes.
- The automated script executed smoothly, confirming end-to-end data flow from scraping to storage.
- The scheduler ran as expected, ensuring timely and repeatable data extraction.
